CMMS Selection: OWASA case study

- Orange County, NC
- Water, Sewer, Reclaimed Water
- Previously implemented Cityworks for Horizontal assets
- Aging MP2 system for vertical assets

Frustration

Implementation

Challenge: Use pain points to help define a business case.

Frustration

- Lack of mobile capabilities
- MP2 no longer supported
- Questionable legacy data
- User interface
- Success of horizontal asset CMMS
- Support asset management initiatives

Frustration

Decision to Migrate

Implementation

Challenge: Top to bottom involvement begins early!

Decision to Migrate

- Communication
- Budgeting
- Strategic plan initiative
- Board Awareness
- Stakeholder Awareness

REQUEST FOR PROPOSAL

Orange Water and Sewer Authority CMMS Software and Services Issue Date: Thursday March 30, 2023

Submittal Deadline: Friday, April 28th 2023 at 2PM

1. INTRODUCTION & OBJECTIVE

Orange Water and Sewer Authority (OWASA) is soliciting proposals from qualified software consultants (Vendors) to provide a Computerized Maintenance Management System (CMMS) for Asset and Work Order Management for their vertical asset facilities as well as fleet management purposes. OWASA will conduct a Proposal-Based Selection process to identify the best overall proposal and select a vendor with which to negotiate a contract. All vendors submitting Proposals shall have demonstrated experience and expertise in provision of CMMS software, CMMS integration, implementation, and support.

To be considered by OWASA, responses to this RFP must be received by 2:00 p.m. Eastern Time on Friday, April 28th. 2023. Refer to Section 5 – Submittal Requirements for details.

2. BACKGROUND AND DESCRIPTION

Orange Water and Sewer Authority (OWASA) provides water, wastewater, and reclaimed water services to around 85,000 people within the 35 square mile Carrboro-Chapel Hill area. The water system is comprised of the three raw water pump stations. Jones Ferry Road Water Treatment Plant, 390 miles of distribution pipes, six drinking water storage tanks, and four drinking water booster pump stations. The wastewater system has 350 miles of wastewater pipes, 21 pump stations, two remote biosolids storage tanks and Mason Farm Wastewater Treatment Plant. The reclaimed water system is made up of a reclaimed water storage tank, a reclaimed water pump station and six miles of distribution pipes. OWASA's systems contain approximately 6,500 vertical assets, 1,800 for water supply and treatment facilities, 4,000 for wastewater treatment and reclaimed water facilities, and approximately 700 for support and operational facilities.

OWASA has been utilizing Infor's MP2 CMMS for facility and fleet maintenance functions at its water treatment plant, waterwater treatment plant, operations center and administration building for 20-years and has identified the need for assessing and implementing an updated modern CMMS solution for vertical facility management. OWASA's distribution and collection systems linear assets are currently managed with Cityworks as their CMMS solution, which does not currently require replacement.

This Request for Proposal's intent is to select an alternative CMMS System (System) for OWASA vertical facilities and fleet maintenance, with potential for an organization-wide CMMS solution for vertical facilities, distribution, and collection in the future.
